Values Statement # 2

|| Preserve access on the North Campus Area for education, research, outreach and recreation

Proximity of the North Campus Area to the developed UAF campus and community in general provides a valuable resource for education, research, outreach and recreation. The UAF Board of Trustees has approved the following statement of intent regarding the future use of the North Campus Area:

Access to work, both on campus and off, needs to be protected in perpetuity. Access is defined as the authorization of a use to occur in the North Campus Area. It is important to note that access for a use is not an absolute property right for all situations. The UAF Board of Trustees has approved the following statement of intent regarding the future use of the North Campus Area:

Values Statement # 3

Continue to provide opportunities for community involvement

that are compatible with the mission of North Campus.

Final Report

Lights along trails
Currently there are lights on approximately 2.2 miles of six trails. The lights are along the T field road, the potato field, and the lighted loop. The trails are frequently used at night. Some may like to see the amount of lighted ski trails expanded, others may not feel expanded the amount of lighted ski trails is appropriate on the 20000 Campus Area.

Campground
In the past a campground was maintained on West Ridge, near where the SAR dish is located. Many of the campers are still in place. Should the campground be reestablished?

T field road
The T field road is one area where there is a high concentration of many other research projects. The lack of tree cover to prevent a high concentration of light at night is a problem. Some of the research projects are: 1) studying the effects of light on the growth of plants, 2) studying the effects of light on the behavior of animals, 3) studying the effects of light on the growth of algae.

High Resolution A.P. to expand the amount of lighted ski trails on the North Campus
If you feel the amount of lighted ski trails should be expanded, please indicate the amount of lighted ski trails you would like to see expanded.

The Biological Reserve
The Biological Reserve is a 100-acre area of land on the North Campus. It is currently used as a research area. The amount of lighted ski trails on the Biological Reserve should be expanded.
