

Communication with users

Toolik Steering Committee 2 meetings this year Thank you for your time and assistance! Three User Forum meetings at TFS Several Title IX outreach sessions at TFS Also introduced mandatory TFS Title IX training and waivers of confidentiality so that information can be sent to NSF

Personal contacts with concerned individuals

Promoting scientific collaboration

Toolik sessions at AGU to promote collaboration 3rd year

tomorrow!

Toolik Steering Committee

Provides input to IAB and NSF on the management and operations of the Toolik Field Station, including the services that we offer under our Cooperative Agreement (CA) with NSF

Supported by the CA

Provides input on development of the station, and how it can best meet needs of a broad community of scientists using TFS as a research & education platform

Helps facilitate site selection of research plots (if there is a conflict)

Provides input on issues related to coordination of science support services & other issues

Toolik Steering Committee

Members:

- Steve Oberbauer (co-Chair) **Breck Bowden Gus Shaver** Michelle Mack Mike Weintraub Ian Billick Dan White Helen Chmura **Faustine Bernadac**
- Donie (co-Chair), Brian, Mike, and Brett

Meets at TFS in summer, in Fairbanks (or Portland) in winter, as desired in between by teleconference

User Forum comments

On-site user concerns & comments:

- Common use equipment requests; binoculars, another networkable printer (lab 2), boardwalk buggy, more garden carts, more bicycles of a range of sizes (fit large and small people)
- Small upgrades: more coat hooks in the dining hall, furniture, shelving in new ATCOs, motion-detector lights in outhouses
- Pad/road grading would be helpful
- More lab space would be helpful
- Discussion about safety training: more on-site resources, more training made available ahead of time
- Degraded plot markers: tundra trash and rebar that is hard to see
- Discussions about managing storage
- Discussion about possible future enhancements for research: growth chambers, satellite camps, but perhaps less demand for on-site N and P determination
- Lots of use of the suggestion box, primarily in relation to food (comments were mostly positive this year)

Appreciation

On-site staff very helpful

- EDC, GIS, Chad, kitchen staff are fabulous
- Kudos for the website, and its ease of use
- European visitors (INTERACT groups, Ellen Dorrepaal) appreciate TFS support
- Dorrepaal) appreciate 1103
- EDC data is very useful
 - Consider adding advanced data products for both EDC and GIS

lapse photos)

EDC help provided to projects is very useful

GIS department help with permitting, maps is greatly appreciated

Frustrations

Continuing frustration with internet connectivity

- Less frustration than in previous years but still some complaints
- Connectivity in new ATCO dorms was poor (partially solved with another AP), and residence side of camp not as good as lab side
- Need to complete fiber upgrade

Vehicles - more for common use, need to replace long-haul vehicles (issues with old trucks out of service parts of this summer), and for LTER

Maintain summer DHE service

Issues

Less discussion of permits, but BLM permitting continues to be perceived as challenging and expensive

Switching over to Right-

Issues

Desire to coordinate and integrate scientific research and measurements

- Preserve legacy of institutional knowledge as PIs retire
- Toolik Field Station searchable on-line database of Toolik publications updated this year, merged with LTER publication database
- TFS will expand Toolik Information System with metadata on projects and links to data; possibility of archiving data for non-LTER projects, if not archived elsewhere
