# The Curvature of the Earth

## CHAPTER 1: THE CURVATURE OF THE EARTH

### 1.1 THE CURVATURE OF THE EARTH

The Earth is a sphere, and its curvature is a fundamental property of its shape. This curvature affects how we perceive distance and direction on the planet's surface. For example, a straight line on a map (a great circle) is the shortest path between two points on the Earth's surface, but it appears curved when viewed from a distance.

### 1.2 THE CURVATURE OF THE EARTH

The curvature of the Earth is a result of its spherical shape. The Earth's surface is curved, and this curvature is a direct consequence of its spherical geometry.

### 1.3 THE CURVATURE OF THE EARTH

The curvature of the Earth is a result of its spherical shape. The Earth's surface is curved, and this curvature is a direct consequence of its spherical geometry. The curvature of the Earth is a result of its spherical shape. The Earth's surface is curved, and this curvature is a direct consequence of its spherical geometry.
